1 Left Hand Column

The left column begins with this section. It carries the distinctive marker `columnsentinel-left`, which the tests use to confirm that text placed in the left column of a two-column layout is extracted. Additional filler prose about botany and seasonal rainfall follows so that the left column achieves a reasonable height and the layout genuinely flows across the two columns rather than collapsing into a single narrow strip.

2 Right Hand Column

The right column carries its own distinctive marker `columnsentinel-right`. This text appears on the same page but in the second column, which is the point of this fixture: to verify that two-column layout is still extracted as readable text, with content from both columns present in the output even though their physical positions on the page differ.
