1 Shopping and Tasks

This list-heavy fixture exercises both `itemize` and `enumerate` environments, including nested lists, so that the tests can confirm bulleted and numbered content is extracted as readable text.

1.1 Bullet Points

- The first bullet item mentions the unique marker `listsentinel-quark`.
- A second ordinary bullet about stacking the shelves and tidying the pantry before the weekend.
- A third bullet that wraps across multiple lines to ensure that line-wrapped list text is extracted as a single logical item rather than being split awkwardly.
  - A nested bullet under the third item, carrying the marker `listsentinel-nested`.
  - Another nested bullet without a marker, purely for depth.

1.2 Numbered Steps

1. The first enumerated step references the marker `listsentinel-neutrino`.
2. The second step requires mixing the reagents and stirring gently for at least ten minutes.
3. The third step repeats the marker `listsentinel-neutrino` to reinforce the assertion that enumerated content is preserved.
   (a) A nested numbered sub-step beneath the third item.
